

Tributary Systems Speaking About Tapeless, Multi-Platform Backup and DR at IBM EDGE2014

Case Study: How ACI Payment Systems Uses Tributary Storage Director for both IBM zOS and HP NonStop

Las Vegas, May 20, 2014 – Today at IBM EDGE2014, Ed Ahl from Tributary Systems, Inc. is presenting a case study on tapeless, multi-platform backup and recovery. Session cBC19 is being held today from 4:30 to 5:30 in Room Murano 3203 at the Venetian.

ACI's challenge was to eliminate tape backup for all platforms. Tributary Storage Director is the only solution that works with both the IBM zOS mainframe and HP NonStop proprietary platforms.

Benefits include:

- **Cost reduction** - Eliminated maintenance & management of tape infrastructure (software/hardware, offsite storage, etc.)
- **Improved customer satisfaction** - Much faster restores for developers worldwide
- **Disaster recovery** - Via cross-replication between Midwest and Southeast data centers
- **Data center consolidation** – From 6 US data centers to 2
- **100% successful mainframe backups** - with less than an hour recovery

For more information about Tributary Storage Director, visit Tributary Systems in Booth 230.

About Tributary Systems & Storage Director

Tributary Storage Director® is the only multi-platform "Any to Any" data protection solution for proprietary systems from IBM and HP, as well as open systems. Storage Director optimizes data protection infrastructure and performance, enables backup virtualization and consolidation, reduces costs, and integrates new technologies like flash and cloud. Storage Director is in use at Fortune 20, Fortune 500 and Fortune Global 1000 companies as well as small and middle market companies in banking, financial services, retail, telecommunications and healthcare. Tributary Systems, Inc. (www.tributary.com) is an IBM OEM, Solutions Integrator and z Development Partner.
