

## Tributary Adds Three Features to Storage Director: NDMP Target, Copy NAS Image, Data Pinning

Bedford, TX, March 12, 2014 – Tributary Systems, Inc. has added **three new features in Release 4.2 of Storage Director: NDMP Target, Copy NAS Image and Data Pinning**. Storage Director is an enterprise-level data protection solution that combines sophisticated software with highly scalable cache and disk array to automate how, when and where enterprises backup and restore data.

A robust, feature-rich data protection solution, Storage Director is in use at *Fortune 20*, *Fortune 500* and *Fortune Global 1000* companies as well as small and middle market companies in banking, financial services, retail, telecommunications and healthcare.

- With the **new NDMP Target feature**, Storage Director can be a backup target for NDMP host servers.
- With the **new Copy NAS Image feature**, virtual and/or physical tapes can be created from backup data Storage Director writes to a NAS file server, enabling rapid data restores without rebuilding files.
- The **new Data Pinning feature** provides the option to keep specific data sets in high-speed cache for immediate restores and also write them to the backup target. The data will reside at both places until overwritten by the backup application.
